## Question: 124

Your published layout.cshtml file contains a static placeholder with a `main` placeholder key and you want to add renderings to the presentation details of a templates standard values; however you cannot see the "main" placeholder key you added to the layout. Of the available options, which is the best explanation of what happened?

- A. There is a missing configuration element in web.config for placeholders.
- B. The wrong layout is associated with the current template.
- C. A Sitecore publish is required to show placeholder keys when editing presentation details.
- D. There is no placeholder settings item for the associated "main" placeholder key.

Answer: D

## Question: 125

As you create templates and add standard values, you know items created from the templates should automatically have the Title field populated with the name of the item.

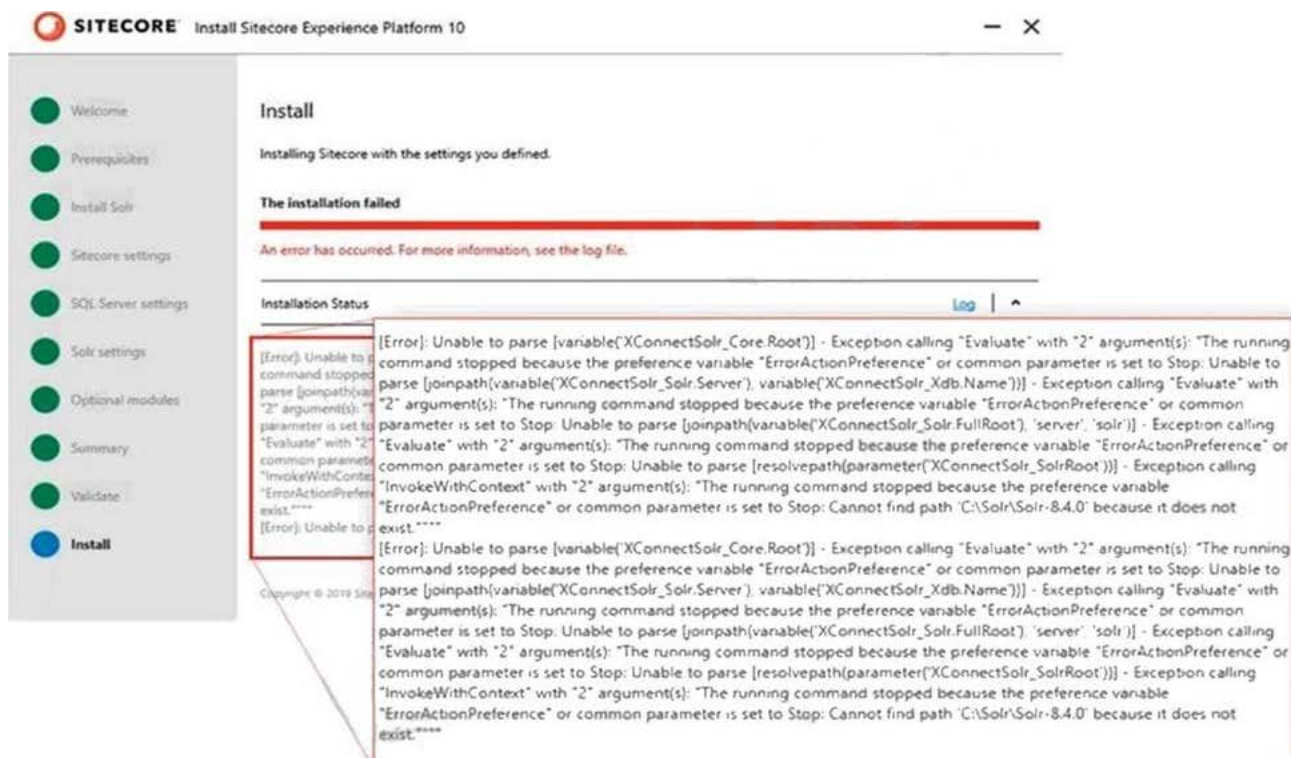

What should you do to ensure this occurs?

- A. Add `$name` token to the template's standard values Title field.
- B. Set `$name` token in the new item's content Title field.
- C. Set `_name` token in the new item's content Title field.
- D. Add `_name` token to the template's standard values Title field.

Answer: A
